The Perioperative Surgical Home (PSH) Model and Tools

- Patient-centered, physician-led, interdisciplinary and team-based system of coordinated care.
- Spans the entire surgical episode from decision of the need for an invasive procedure – surgical, diagnostic or therapeutic – to discharge and beyond.
- Designed to achieve the triple aim of improving health, improving the delivery of healthcare and reducing the cost of care.

The PSH Model

PSH Core Group

Data Education/ Analytics Communication

Instructions for Taking Your Medicines on the Morning of Your Surgery

Multidisciplinary Team

Medication Stoplight

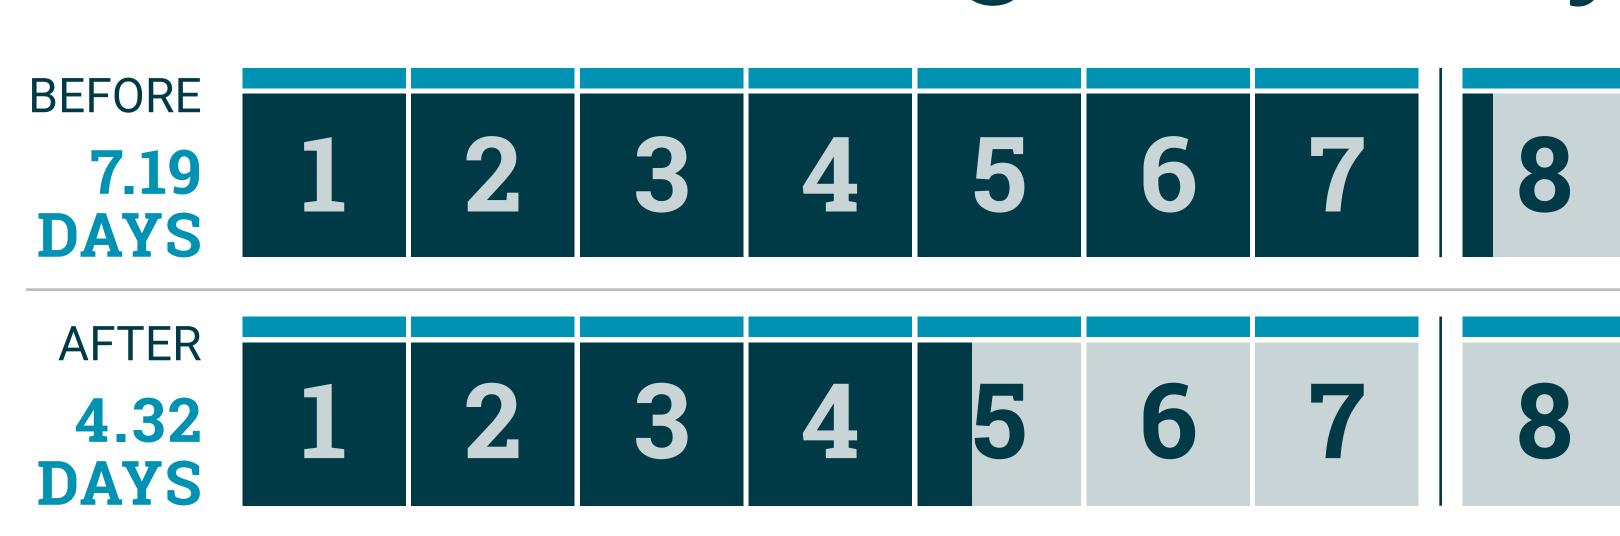

TriHealth implemented PSH with elective colorectal patient population. The results are below:

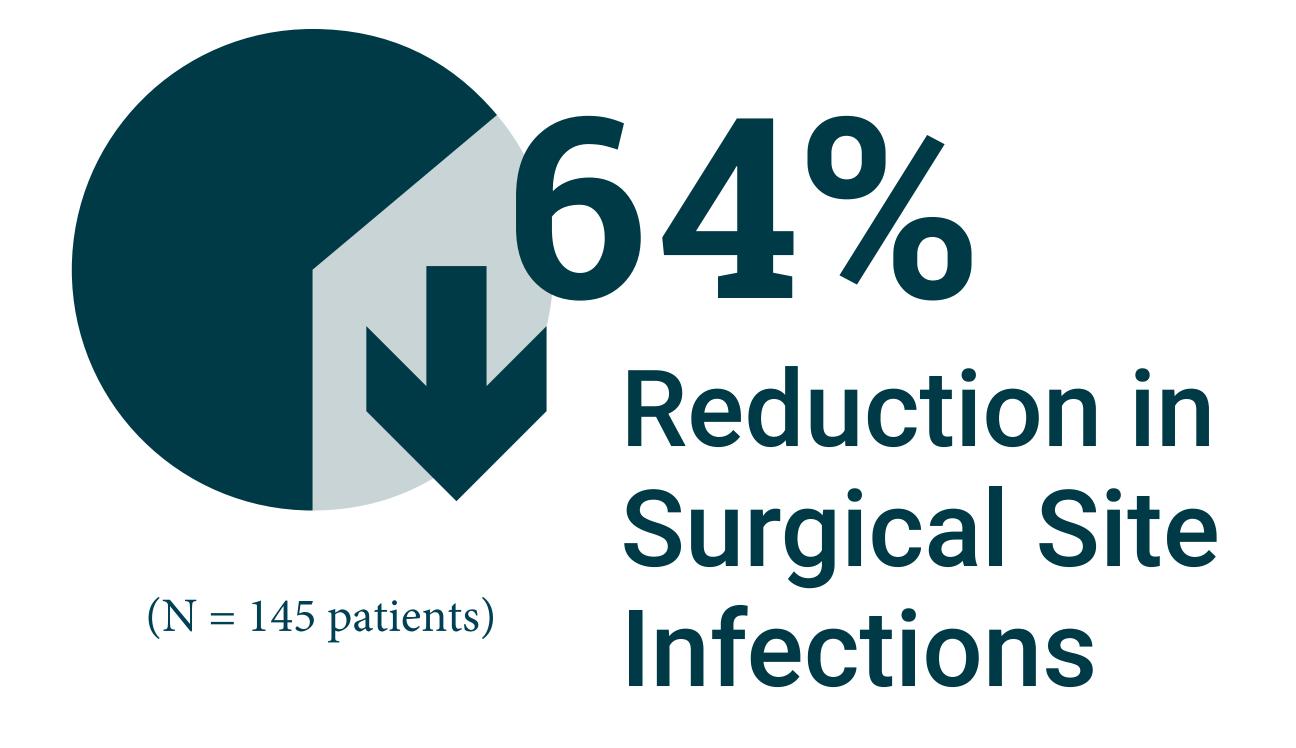

(N = 145 patients)

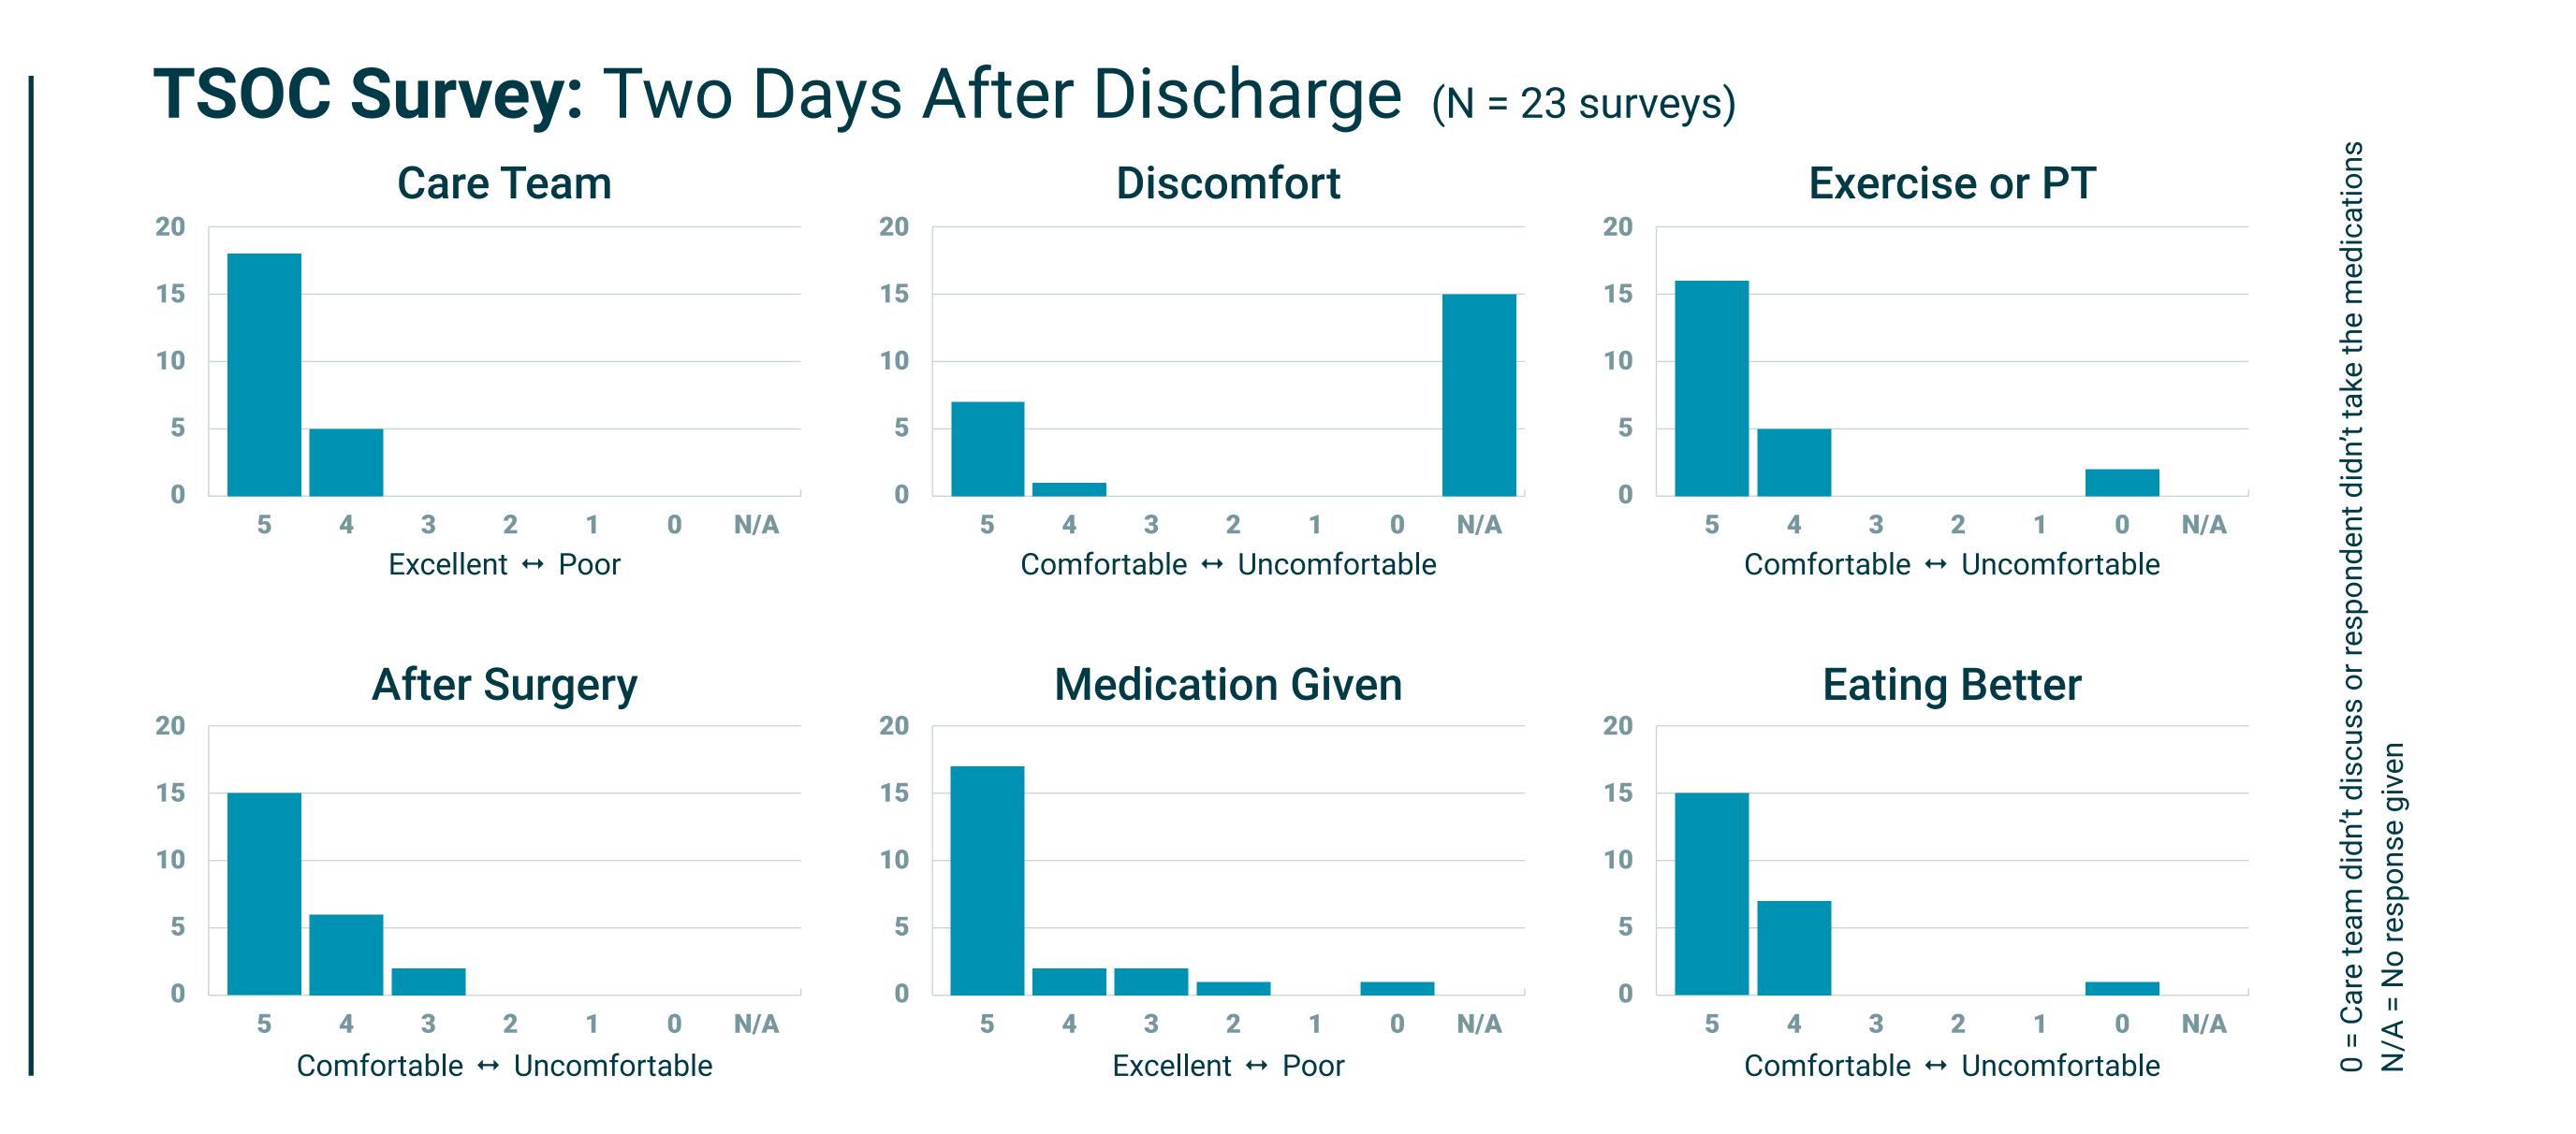

Reduction in Readmission Rates

Decreased Length of Stay

A result of embedding a surgical site infection prevention bundle into the intraoperative navigator.

Other pilot results:

Discharge

Community Hospital reduced LOS for colorectal surgery from 5.2 to 3.8 days

Midwest Academic Center reduced readmissions for orthopedic patients by 50 percent

Southeast Community Hospital reduced admissions for orthopedic patients to SNF by 22 percent and admissions to home health by 34 percent

Southeast Community Hospital demonstrated an average savings of over \$4,000 per orthopedic case
